### **Hepatitis C treatment available**

Did you know that Family Planning NT has a number of doctors that can prescribe medications that cures hepatitis C?

Left untreated, hepatitis C can cause inflammation of your liver and stop it working properly. Many people have no symptoms from hepatitis C for a long time, but you might be at higher risk of hepatitis C if you have ever used injecting drugs or had tattoos or medical procedures done in a country outside of Australia.

Come in to chat with our doctors about whether you need a test.

*FPWNT a specialised reproductive and sexual health service.*
