**FPWNT prescribes PrEP.**

Did you know that the doctors at Family Planning NT can prescribe PrEP?

PrEP is the use of a daily tablet to prevent HIV infection in people who are HIV negative.

PrEP is taken on an ongoing basis *before* being potentially exposed to HIV and is for people who are considered at risk of getting HIV.

Some would say it is similar to “the pill” that women take to prevent unplanned pregnancy.

[Find out more here](#) or come in and chat to one of our doctors.

*FPWNT a specialised reproductive and sexual health service.*
